My Personal Review:
Although he wrote a lot about the general theory of systems, I think it is his approach to the problems of how living systems interact with their environment in a catabolic manner that makes him really important. He has had impact from fields like biology to fluid dynamics. He set a standard for how we think about history and with Lewis F. Richardson The Collected Papers of Lewis Fry Richardson (Collected Papers of Lewis Fry Richardson, Vol 2) and Isaac Asimov The Foundation Trilogy made a science possible.
